Toolkits

Toolkits are collections of tools that are designed to be used together for specific tasks and have convenient loading methods. For a complete list of these, visit [Integrations](#).

All Toolkits expose a `get_tools` method which returns a list of tools. You can therefore do:

```
# Initialize a toolkit
toolkit = ExampleToolkit(...)

# Get list of tools
tools = toolkit.get_tools()

# Create agent
agent = create_agent_method(llm, tools,
prompt)
```
