# Chat Messages

## ! INFO

Head to [Integrations](#) for documentation on built-in memory integrations with 3rd-party databases and tools.

One of the core utility classes underpinning most (if not all) memory modules is the `ChatMessageHistory` class. This is a super lightweight wrapper that provides convenience methods for saving `HumanMessages`, `AIMessages`, and then fetching them all.

You may want to use this class directly if you are managing memory outside of a chain.

```
from langchain.memory import  
ChatMessageHistory  
  
history = ChatMessageHistory()  
  
history.add_user_message("hi!")  
  
history.add_ai_message("whats up?")
```

```
history.messages
```

```
[HumanMessage(content='hi!',  
additional_kwargs={}),  
  AIMessage(content='whats up?',  
additional_kwargs={})]
```
